

LARGE FORMAT EMISSIVE DISPLAY

Abstract of the Disclosure

5 A backframe may be utilized to align a plurality of
emissive display tiles precisely with respect to one
another. The individual display tiles may be removable
from the backframe for replacement or other reasons. As a
result, the spacing between individual tiles in an overall
large format display may be precisely controlled in some
cases. In addition, regularly occurring gaps between
10 adjacent tiles may be filled with a suitable light
absorbing material to reduce the visibility of seams.
